Disclaimer

Bushwalking and mountain climbing are potentially hazardous activities. The terrain may be unstable and subject to rock-falls and other hazards. The Northern Territory (N.T.) is home to various species of snakes, some of which have poisonous venom that can be fatal, or lead to other serious consequences. Other animals such as some spiders and ants can bite with potentially serious consequences. Some spiders carry venom that can lead to death. Some people may suffer from conditions that cause those persons to enter shock from certain ants or wasp bites.

The SOTA Management Team, the Australia - N.T. Association and their officers shall not accept responsibility for any death, injury or liability in any form resulting from participation in SOTA activities within any state or territory within Australia or anywhere else in the world.

The inclusion of a summit in this Reference Manual does not indicate that it is safe, legal, or even possible to climb the summit. The Summit Reference data is not guaranteed to be accurate and no reliance shall be placed upon it.

Any participant shall check applicable local government, state and Commonwealth laws to be sure that a bushwalk or climb up any of the summits listed in this manual is legal. Some summits in this manual are on private property and the pursuit of SOTA activities shall respect private property rights. Some areas of Australia are public land, but are closed to public access, including “closed” water catchment areas and “reference areas” within parks managed by National Parks authorities. Significant criminal penalties can apply if participants enter these areas.

As a particular caution to European hikers, please note that “Every Man’s Right” does not exist in Australia; permission to cross private lands must be expressly granted and cannot be assumed.

Some Australian mountains are very challenging and require considerable skill, including the equipment and knowledge of how to self-arrest. It is up to the individual to determine his/her personal assessment of fitness level, skill, training and experience to safely attempt bushwalking or climbing in Australia.

The Australia – N.T. Association is Incorporated under SOTA rules, but it is merely an informal mechanism of advice to the international SOTA program. There is neither an Incorporated Association or an Unincorporated Association under any State or Territory Act in Australia.

1. Change Control

Date	Version	Details
1 March 2014	1.0	First formal issue of this document

2. Association Reference Data

Association	Australia (VK)
Commencement date	
Regions within N.T.	DA Far north AL Alice Springs and central belt UL Uluru and south west
Association parameters	
Summit operation criteria	Operation must be within 25m vertically of the summit
All VK8 regions:	
Band 1, score 1 point	< 500 m a.s.l.
Band 2, score 2 points	>= 500 m a.s.l. < 800 m a.s.l.
Band 3, score 4 points	>= 800 m a.s.l. < 950 m a.s.l.
Band 4, score 6 points	>= 950 m a.s.l. < 1050 m a.s.l.
Band 5, score 8 points	>= 1050 m a.s.l. < 1150 m a.s.l.
Band 6, score 10 points	>= 1150 m a.s.l.
Seasonal bonus	No
Bonus rationale	
Min. height for bonus	
Bonus period dates	
Association sponsored awards	None
Association Manager	Jack Cook VK2AXL

2.1. Program derivation

The Australia-N.T. association is an extension of similar programs active in countries around the world. The list of summits is based on mapping data available from:

- Australian Government Geoscience Australia (www.ga.gov.au)
- Google Maps is used as a secondary source.

The summit reference list shall be updated on a regular basis. Your help to identify new summits is not only welcome but encouraged where you are aware of any summit not referenced in this manual that meets the association criteria. Please refer to section 2.9 - Process to maintain summit reference list.

2.2. General information

The SOTA General Rules shall govern and take precedence over any rules found herein.

Full text of the SOTA General Rules can be found at: <http://www.sota.org.uk/docs/SOTA-General-Rules-1.16.pdf>

2.3. Final Ascent and Activation Zone

The Australia-N.T. association defines the SOTA Activation Zone as an unbroken area within 25 vertical meters of the summit.

Note that some areas have government restrictions on the permissible methods of ascent to summits or access to parks.

A Summit activated before a reference number is issued to it cannot be claimed for SOTA award points.

All regions within the Australia-N.T. association have the same award scheme; however this may change with respect of new regions that are added.

Should compliance with any these rules appear impossible because of the peculiar topography of the summit or for activator safety reasons, contact the Regional Manager.

Feel free to contact the Regional Manager for any clarification as to whether activation of a particular summit shall be valid for SOTA credit.

2.4. Rights of way and access issues

Neither SOTA nor the Australia-N.T. Association have any knowledge concerning the land ownership or right of way issues of any summit or route to a summit.

It is up to each individual to ascertain the legal rights and obtain all necessary permission from the property owners of the route taken to reach a summit.

Some land may be national park or traditional tribal land and access by the public may be restricted to permit holders only.

2.5. Maps and navigation

At minimum, take a compass and topographical map(s) of sufficient resolution. It is strongly recommended to carry topographical maps that use the GDA94 MGA grid as this manual provides grid references using this datum shown in the summit reference as Zone, Easting and Northing.

A GPS device should be carried only as a secondary source of navigation information. The GPS should use the GDA94 or GDA datum, and if that is unavailable, the compatible WGS84 datum. If display units are set to UTM or MGA, then these will be compatible with the grid references given in this manual. Latitude and Longitude are expressed in Decimal-Degrees using the GDA94/WGS84 datum. All Latitudes are negative and all Longitudes are positive. This system has been chosen for its compatibility with Google Maps. You need only enter a summit's decimal coordinates into Google Maps to see a topographic, satellite or road map of a summit or to find driving directions to the closest roads. Note that for many remote summits Google maps may give misleading or inappropriate navigational information, so please use this service with care.

Note that some older Australian maps use the AGD66 datum. Both latitude/ longitude references and MGA grid references will be in error by about 130 metres using this datum. Use of this datum is not recommended, particularly for off-track navigation or accessing

remote summits.

The SOTAwatch website (www.sotawatch.org) is an excellent repository of summit access information, and all activators are encouraged to submit any mapping, trail, access permission or other specific summit advice they can acquire. Please be sure to respect intellectual property law when adding information to the SOTA watch site.

More information on N.T. national parks can be found at:

<http://www.parksandwildlife.nt.gov.au/>

Maps Australia wide can be obtained from <http://maps.google.com> using the terrain feature. The Google Maps data tends to be of lower quality than maps from official sources.

2.6. Safety considerations

Check the Weather before going. Weather can change rapidly and unexpectedly so be prepared for rain, strong winds, sun and extreme temperatures. These conditions are even more variable and intense on high exposed land. N.T. can be very hot and in many areas there is no water available. Not all water from streams and other non-treated sources can be considered safe to drink. Temperatures in N.T. can vary a great deal. Areas which are very hot during the day can drop to near freezing at night.

Lightning is always a danger! Know the early signs of weather associated with lightning. Upon the first sign of visible thunderstorms, lightning, or thunder, reduce your exposure immediately by descending to lower ground. Proximity to an antenna puts you at greater risk. Do not seek shelter under trees or rock outcrops. Some mountain areas are known for attracting lightning.

Bushwalking is an inherently risky endeavour. The consequences of the lack of preparation can be tragic. While the risks you assume by participating in SOTA activities can never be dismissed, they can be greatly diminished through knowledge, preparation and experience. Each person shall judge for themselves whether an objective is achievable. The listing of a summit in the reference list does not imply that it is easy to reach the summit. Assess your skill and fitness levels realistically and travel well within your limitations. Remember, once you make the summit, you are only half the way home. Often the down climb is where most accidents occur due to fatigue and lack of focus.

Vehicle Condition and type must be appropriate for the roads you intend to travel. You can expect many of the access roads to be no better than steep gravel roads. Many roads in remote areas are 4WD access only, and may be subject to seasonal closures. Heavy penalties apply for travelling on roads during seasonal closures.

2.6.1. Carry the Ten Essentials.

The “Ten Essentials” is a list of essential items bushwalking authorities deem necessary for safe travel in the bush.

1. Map(s)
2. Compass (optionally supplemented with a GPS receiver)
3. Sunglasses and sunscreen
4. Extra food and water
5. Extra clothes
6. Headlamp (outdoor)/ torch

7. First aid kit
8. Fire starter
9. Matches
10. Knife

Note that many parks in Australia are subject to limitations or permanent bans on non-emergency use of fires. All areas of Australia are subject to declarations of Total Fire Bans.

Beware of wildlife. Snakes call Australia home. They can kill or severely injure you. Understand their range and behaviour so you can take necessary precautions.

Physical Fitness is required. Some of the summits listed in this manual require a significant degree of physical exertion to reach the summit. Most summit access is off track. Off track walking increases the risk of becoming lost or encountering dangerous wildlife. Know your limitations, listen to your body and put your health before amateur radio. Check your pulse under heavy exertion and remember to slow down, bring plenty of water and enjoy the activation. Medical evacuation from many of the listed summits is slow and difficult. A heart attack in remote areas is likely to result in death as medical services require some time to respond.

Proper Clothing is necessary. You should never venture into major mountain areas without walking boots, clothing to match the conditions and protection against sun and rain.

Mobile phone coverage in N.T. is only available around a few towns and cannot be relied on. Satellite phones or HF radio are required to communicate. Note that dialling 112 may work where dialling 000 does not.

Proper track etiquette is expected. Keep to the walking tracks where they can give access to the summit. Off-track walking requires significantly greater navigational skill and is required to access most summits.

Respect other bushwalkers and the environment and take out what you bring in.

Bushfires are a risk especially during drought. Fire bans are strictly enforced with heavy fines for noncompliance. Check with the N.T. Dept of Land Resource management (www.lrm.nt.gov.au/bushfires) regarding any fire bans. It is your responsibility to be aware of any fire ban that has been declared.

2.6.2. Becoming lost

If you become lost and unable to recover to a known position, then you should remain near your current position, if safe to do so. Signal Fires (safely contained to minimise the chance of damage to the forest, property, livestock or even you) attract attention and smoke produced by green foliage can be seen from the air.

Construct the best possible shelter from the materials that may be available to you and preserve food. If forced to descend into gullies and valleys to obtain water, again remain in a position near the water source, and do not attempt to continue down the valley. Terrain in valleys can be impassable and is often more hazardous than ridges, which you would have likely been using to access the summit before coming lost. It is also easier to locate a “static” alert missing person than a “dynamic” missing person who is still moving around.

A call on HF amateur radio may also provide assistance if required.

2.7. Foreign Amateur Radio Operators in Australia

Please refer to: http://www.acma.gov.au/WEB/STANDARD/pc=PC_1311

2.8. Association Awards

There are no Australia- N.T. (VK8) Association specific awards.

2.9. Process to maintain summit reference list

The summit list is maintained by each regional manager. Additional summits that have been identified shall be added on a periodic basis.

A new summit may be requested to be included in the list by contacting the regional manager.

Following a review and verification, including approval by the SOTA Management Team, to whether the summit meets both the General and Regional criteria the summit shall be added to the list.

All potential new summits must meet the guidelines found under the SOTA General Rules <http://www.sota.org.uk/docs/SOTA-General-Rules-1.16.pdf> and have a prominence higher than 150 metres.
